DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Ejima et al (6,342,900).

Regarding Claims 1 and 4, Ejima et al teaches a method for displaying a perceived continuous image across first and second display areas, each display area having a given display resolution and the display resolution of one display area is different than the display resolution of the other display area comprising: a) providing a source image to be displayed on the first and second display areas (Figures 6,10-14; Column 13, line 34- Col.16, line 56);

b) providing first and second portions of the source image to be displayed on the first and second display areas respectively wherein the second portion of the source image is a scaled portion of the source image such that when the first and second portions of the source images are displayed on the first and second display areas the resulting displayed image appears substantially continuous to a viewer situated to view the displayed image and the displayed resolution of the first portion of the source image is different from the displayed resolution of the second portion of the source

image (Figures 6,10-14; Column 13, line 34- Col.16, line 56), and
c) transmitting the first portion of the source image to the first display area and the second portion of the source image to the second display area (Figures 6,10-14; Column 13, line 34- Col.16, line 56).

Regarding Claims 2 and 5, Ejima et al teaches a method of claim 1 wherein the source image is provided in at least one computer readable file (fig.6).

Regarding Claims 3 and 6, Ejima et al teaches a method of claim 1 wherein the source image is provided by at least one video camera (fig.6).

Regarding Claims 7 and 8, Ejima et al teaches a method for displaying a perceived continuous video image across first and second display areas, each display area having a given display resolution and the display resolution of one display area is different than the display resolution of the other display area comprising: a) capturing a first video image to be displayed on the first display area (Figures 6,10-14; Column 13, line 34- Col.16, line 56),

b) capturing a second video image to be displayed on the second display area wherein the second image is a scaled portion of the first image such that when the images are displayed on the first and second display areas the resulting displayed image appears substantially continuous to a

viewer situated to view the image and the displayed resolution of the first video image is different from the displayed resolution of the second video image (Figures 6,10-14; Column 13, line 34- Col.16, line 56) and
c) transmitting the first video image to the first display area and the second video image to the second display area (Figures 6,10-14; Column 13, line 34- Col.16, line 56).

Response to Arguments

3. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection.
